Warm-up Problems

1. Find an explicit formula (without an integral) for the following integral functions. (Make sure you understand how and why these are functions of x .)

$$(a) \quad g(x) = \int_1^x \sin t \, dt =$$

$$(b) \quad g(x) = \int_1^x \cos t \, dt =$$

$$(c) \quad g(x) = \int_1^{x^2} \cos t \, dt =$$

$$(d) \quad g(x) = \int_1^x \frac{1}{t} \, dt =$$

$$(e) \quad g(x) = \int_3^x \frac{1}{t} \, dt =$$

$$(f) \quad g(x) = \int_3^{x^2+4} \frac{1}{t} \, dt =$$

$$(g) \quad g(x) = \int_x^{x^2+4} \frac{1}{t} \, dt =$$

2. For each of the integral functions in Problem 1, compute $g'(x)$.

Lecture Problems

3. Compute the derivative of these functions.

$$(a) \quad \frac{d}{dx} \int_1^x \sin(t^2) \, dt =$$

$$(b) \quad \frac{d}{dx} \int_x^1 \sin(t^2) \, dt =$$

$$(c) \quad \frac{d}{dx} \int_x^x \sin(t^2) \, dt =$$

$$(d) \quad \frac{d}{dx} \int_1^{x^2} \sin(t^2) \, dt =$$

$$(e) \quad \frac{d}{dx} \int_x^{x^2} \sin(t^2) \, dt =$$
