Math 132 - September 22, 2017

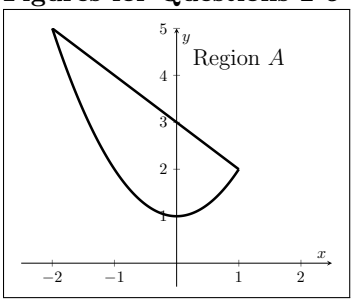
6.2-6.3: Volumes

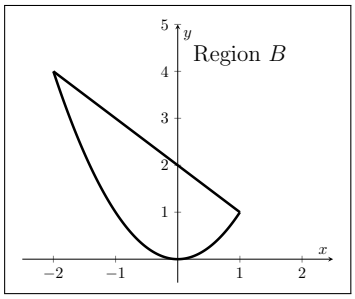
1. Is the volume a volume of rotation? If not you probably need: $V = \int_a^b A(x)\,dx$ or $V = \int_a^b A(y)\,dy$
2. Volume of revolution? Washers or shells? Where is the axis of rotation? Did you draw the solid (or the part of the solid in the xy-plane)?
3. Washers: $V = \displaystyle\int_a^b \pi r^2\,dx$ or $V = \displaystyle\int_a^b \pi r^2\,dy$
   - Identify if integral is dx or dy. (If axis is vertical, you should integrate dy. If axis is horizontal, you should integrate dx.)
   - Identify outer and inner radii in your picture (make sure you measure from the axis to the "original" region, not the reflected region)
   - Set up integral and integrate
4. Shells: $V = \int_a^b 2\pi r h\,dr$
   - Identify if the integral is dx or dy. (If axis is vertical, you should integrate dx. If axis is horizontal, you should integrate dy.)
   - Identify the radius, measured to your original region. Identify the height.
   - Set up the integral and integrate.

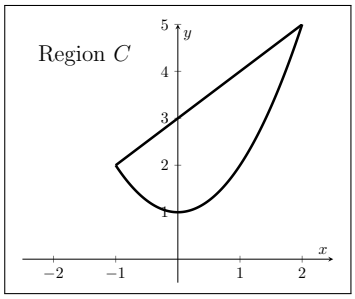
Warm-up Problems

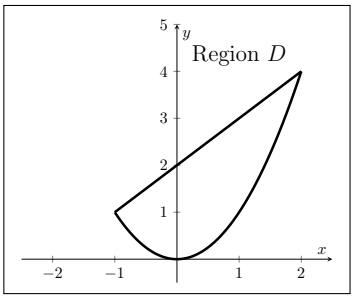
1. **Clicker** Given two y values, y_1 and y_2, how do you find the distance between these y-values?
   (a) $y_1 - y_2$ (b) $y_2 - y_1$ (c) $y_1 + y_2$ (d) $|y_1 - y_2|$ (e) $|y_2 - y_1|$

Figures for Questions 2-5









2. Let R_1 be the region bounded by $y = x^2$ and $y = x + 2$. Find the region above that matches R_1.
   (a) A (b) B (c) C (d) D (e) None
3. Let R_2 be the region bounded by $y = x^2$ and $y = -x + 2$. Find the region above that matches R_2.
   (a) A (b) B (c) C (d) D (e) None
4. Let R_3 be the region bounded by $y = x^2 + 1$ and $y = x + 3$. Find the region above that matches R_3.
   (a) A (b) B (c) C (d) D (e) None
5. Let R_4 be the region bounded by $y = x^2 + 1$ and $y = -x + 3$. Find the region above that matches R_4.
   (a) A (b) B (c) C (d) D (e) None

Class Problems

6. Take the region bounded by $y = x^2$ and $y = x + 2$.
   (a) Draw this region rotated about $y = -1$
   (b) Draw in a slice when $x = -1/2$.
   (c) Draw in more slices: $x = -1$, $x = 0$, $x = 1$, $x = 2$.
   (d) With your fingers on your diagram, point out the outer radius of the washer. For a given slice at x, write down a formula for the outer radius.
   (e) With your fingers on your diagram, point out the inner radius of the washer. For a given slice at x, write down a formula for the inner radius.
   (f) With your fingers, point out the x values for which you have slices.
   (g) Cross sectional area is $A(x) = \pi(r_o^2 - r_i^2)$. Find an expression for $A(x)$.
   (h) Write down an integral representing the volume.

7. **Clicker** Repeat Problem 6 but this time rotate about $y = 0$ (the x-axis). In particular, click on the cross sectional area:
   (a) $A(x) = \left[(2+x)^2 - (x^2)^2\right]$
   (b) $A(x) = \pi\left[(2+x)^2 - (x^2)^2\right]$
   (c) $A(x) = \pi\left[(2+x) - (x^2)\right]^2$
   (d) $A(x) = \pi\left[(2+x) + (x^2)\right]^2$
   (e) $A(x) = \pi\left[(2+x)^2 + (x^2)^2\right]$
   (f) I hate volumes!!

8. Repeat Problem 6 but this time rotate about $y = 4$.

9. Repeat Problem 6 but this time rotate about $y = 100$.

10. Repeat Problem 6 but this time rotate about $y = 1$. (Tricky!)

11. Repeat Problem 6 but this time rotate about $x = 3$. (Tricky!)

12. Do all these problems, but with the other regions in Problems 2-5.
